

MeeFog™ Zone Valve Panels

Zone Valve Panel

Remote-Mount Humidity Sensor

What it does:

The MeeFog Zone Valve Panel provides control for up to five fogging zones.

Features:

- Slow acting valves eliminate water hammer associated with solenoid valves.
- Available with optional humidity controllers with remote-mount sensors (shown in photo).
- Can accept signal from other control systems (remote switch closure actuates valves).
- When valves are controlled by panel mounted humidity controllers, as shown in the photo, they are manually opened or closed by changing the setpoint on the associated humidity controller.
- Valves can also be controlled by remote switch closure from a central control computer, or other customer provided controller. In this case Hand/Off/Auto switches (not shown in photo) are provided for each valve.
- UL certified (508A enclosed industrial control panels).
