MeeFog™ Effects Create an Interactive Experience at Louisiana Children’s Museum

THE BENEFITS OF MEEFOG™ TECHNOLOGY

- Pure water; non-toxic and chemical free
- Replicates natural fog with plume-like clouds
- Precise control can adjust the amount of fog depending on weather conditions.

CHALLENGE
To create a memorable and interactive art piece, welcoming visitors crossing the museum’s foot bridge.

SOLUTION
The museum selected an artist to create a fog display. Using MeeFog, the artist was able to bring to life misty clouds that swirl around the bridge at the top of each hour and half hour.

LOUISIANA CHILDREN’S MUSEUM
NEW ORLEANS, LOUISIANA
After more than 30 years on Julia Street in downtown New Orleans, the museum was relocated among the live oak trees of City Park. Meticulously designed to be a social, cultural and learning resource for children and families, the museum offers hands-on experiences for learning literacy, health and wellness, arts and culture, environmental education, and STEM.

With a total of 8.5 acres of indoor and outdoor space, the $47.5 million project includes a LEED certified building, situated on and over a lagoon which shapes the site. Outdoors, visitors have the chance to interact with swirling fog that complements the museum’s focus on water and the ecology of coastal Louisiana.
INSTALLATION

Two MeeFog high pressure pumps, and a MeeFog reverse osmosis water treatment system were installed at the museum. The high pressure pumps direct pure water to an array of 452 nozzles, strategically placed around the bridge to create ever-changing fog drifts.

At the top of each hour, the fog display can be viewed from the foot bridge. The control system turns the fog on and off according to the display schedule. It begins with a low pressure setting, building momentum as the fog goes on.

MeeFog™ systems offer artists and designers innovative aesthetic possibilities to create living and moving pure water fog effects. Fog adds dimension and impact to a design, and it can be used to highlight and accentuate landscape elements.

Mee Industries has a vision for the future that incorporates a firm commitment to quality through extensive research & development, innovative product design, and continual improvement.

ABOUT MEE INDUSTRIES

For over 50 years Mee Industries has led the world with innovative water fog technology. MeeFog™ systems are used to humidify and cool many industrial, commercial and agricultural processes and to create interesting and dynamic special effects. Today there are over ten thousand MeeFog™ systems in use around the world. Mee Industries is an ISO 9001 certified corporation and manufactures components to meet UL and CE requirements.

Mee Industries is a privately held company with corporate headquarters in Irwindale, CA. The MeeFog team looks forward to helping you with your fogging project.

“It is a really special installation that has brought tons of joy”
